PARTS AND MAINTENANCE MANUAL ELECTRIC MINUTE MISER™

MODELS: 898320A, 898320B, 898320EE, 898323, 898323EE

Part No. 840505 Rev. J

1———GENERAL INFORMATION

IMPORTANT!

THIS MANUAL WILL AID YOU IN THE SAFE OPERATION AND PROPER MAINTENANCE OF YOUR EQUIPMENT. READ MANUAL THOROUGHLY BEFORE ATTEMPTING OPERATION. IF ANY PORTION IS NOT CLEARLY UNDERSTOOD, CONTACT AN AUTHORIZED DEALER FOR CLARIFICATION.

To make sure you are fully aware of safety and service information, the following two symbols are used throughout this manual.

This symbol is used throughout the manual to alert you to information about unsafe actions or situations, and will be followed by the word DANGER, WARNING, or CAUTION. DANGER indicates immediate hazards that may result in severe injury or death. WARNING indicates unsafe actions or situations that may cause severe injury, death and/or major equipment or property damage. CAUTION indicates unsafe actions or situations that may cause injury, and/or minor equipment or property damage.

NOTE: This appears next to information or instructions which will help you operate and maintain your equipment the right way.

WARNING

- The information and instructions included in this manual alert you to certain things you should do very carefully. If you do not, you could:
 - · hurt yourself or others
 - hurt the next person who operates the equipment
 - · damage the equipment.
- This manual contains essential operation and safety information and must remain with the unit at all times, within easy access of any operator.

Additional manuals are available through your dealer.

IMPORTANT!

THIS EQUIPMENT SHOULD NOT BE MODIFIED OR ADDED TO WITHOUT THE MANUFACTURER'S AUTHORIZATION.

WARNING

 Altering this equipment in any manner which adversely affects the equipments operation, performance, durability or use, may cause hazardous conditions.

Direct any inquiries to:

Textron Golf, Turf and Specialty Products Attn: Director of Engineering Services P.O. Box 82409 Lincoln, NE 68501–2409 USA

SPECIFICATION INFORMATION

All information contained in this manual is the latest available at the time of printing. Textron Golf, Turf and Specialty Products reserves the right to make changes at any time without notice.

Whenever a name brand product is specified, an equivalent product may be used unless stated otherwise.

CHANGE OF OWNERSHIP OR ADDRESS

Textron Golf, Turf and Specialty Products makes every effort to keep owners informed of all safety related information. Therefore, changes in ownership and/or address should be reported to the manufacturer.

Your dealer has REGISTRATION CHANGE FORMS which will be filled out and filed by the dealer for his records, and a copy will be sent to the manufacturer.

DEALER INFORMATION

For your nearest dealer location write to:
Textron Golf, Turf and Specialty Products
Attn: Sales Coordinator
P.O. Box 82409
Lincoln, NE 68501–2409 USA

In the USA and Canada call 1-888-922-8873 (dealer information only).

2———— IDENTIFICATION

THE PRODUCT MODEL NUMBER, MODEL YEAR AND SERIAL NUMBER MUST APPEAR ON ALL CORRESPONDENCE CONCERNING THIS UNIT. These identification numbers appear on the decal attached to the left side of the kick panel. See Figure 1.

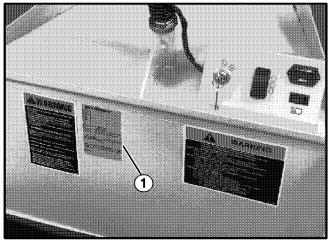

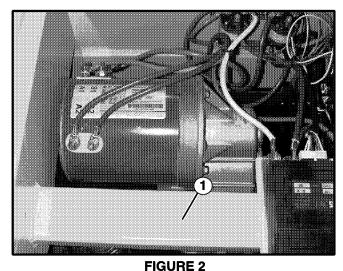

FIGURE 1

1. Model Number, Model Year and Serial Number

The model number is also stamped on top of the frame crossmember beneath the rear deck. The vehicle serial number and model number also appear on top of the rear crossmember under the deck. See Figure 2.

1. Serial and Model Numbers on Rear Crossmember

S—————— SPECIFICATIONS

Brakes

Service: Rear wheel, self-adjusting drum brakes

Parking: Toe lock on brake pedal

Power

Motor: 24-volt, DC series; direct drive **Horsepower:** 1.5 hp at 2800 rpm; 4.3 hp at

1200 rpm

Differential: Bevel gear with spur and helical gear

reduction

Electrical System

Batteries: four 6 volt, 225 amp hr. batteries

Charging: 115 volt AC, 24 volt DC, 25 amp built-in

Lestronic II automatic charger

Speed Control

Programmable 250-amp electronic speed controller

LED Battery Condition Meter Arcless Direction Control Switch Optional

244 amp hr. batteries

Performance

Rated Capacity: 550 lbs. (249 kg); includes 200 lbs.

(91 kg) for operator

Speed: 10.5 mph (16.9 km/h) maximum

Steering

Handlebar (wheel type steering optional)

Suspension

Front: Rubber mounted torque arm

Rear: Heavy-duty coil springs with shock absorber

Seats

1-passenger, vinyl-clad seat and backrest; backrest pivots downward to provide seating for 1 passenger;

operator presence seat switch

Tires

Size: 4.80 x 8, load range B, optional solid or foam

filled

Pressure: 60 psi (345 kPa) cold

Dimensions

Height: 39" (991 mm) to top of handlebar

Length: 85" (2.2 M) **Width:** 30" (762 mm)

Cargo Area: 22.75" x 28.5" x 4"

(578 mm x 724 mm x 102 mm)

Weight: 690 lbs. (313 kg) with batteries

Wheelbase: 53" (1.3 M)

Rear Wheel Tread: 25.8" (655 mm)

Handlebar Steering:

Clearance: 53" (1.3 M) minimum intersecting aisle **Inside Clearance Circle:** Turnabout rear wheel

Outside Clearance Circle: 130" (3.3 M)

Wheel-type Steering (Optional):

Clearance: 56" (1.4 M) minimum intersecting aisle

Inside Clearance Circle: 46" (1.2 M)
Outside Clearance Circle: 154" (3.9 M)

Range

Up to 35 miles (56 km).

Note: Range can vary depending on a number of factors, including battery size and condition, payload, number of stops, tire pressure, speed, temperature, and operating terrain.

Special Tools

Controller Programmer Part No. 893052

Battery Hydrometer Part No. 841056

Capacitor Discharge Resistor . Part No. 841148

Fluke 10 Meter Part No. 841057

4.1-MAINTENANCE GUIDE

Regular servicing and preventive maintenance will help ensure that your vehicle performs at its best.

The following maintenance guide lists recommended tasks, schedules and necessary lubricants/sprays.

EP = Extreme pressure lube

PG = Pressure gun grease (lithium base)

80-90 multigrade SAE =

TP = Terminal protector spray (Part No. 841192)

As Required

Check differential lube level.

Remove and clean wire terminals, battery terminals and batteries, reinstall wire

terminals. (TP)

Daily

Check service/parking brake: adjust as necessary.

Check operation of backup alarm when direction selector is in Reverse.

Examine tires for cuts or excessive wear.

Check wheels for bent rims, missing or loose lug nuts.

Recharge batteries to full

charge state.

Weekly Check tire pressure.

> Fill batteries to proper level and check specific gravity.

Every 50 Hours Perform previous checks.

Check front fork for damage

or missing hardware.

Check front wheel alignment.

Every 500 Hours Perform previous checks.

> Lube fork pivot bushing and brake pedal pivot. (PG)

Lube and adjust service/ parking brake. (PG)

Every 1000 Hours

Perform previous checks.

Change differential lube. (EP)

Clean and repack front wheel bearings. (PG) Check motor brushes.

4.2-- LIFTING THE VEHICLE

WARNING

When raising the vehicle, use jack stands to provide adequate support and test the stability of the vehicle on the stands. DO NOT rely on hydraulic or mechanical jacks for support.

Place chocks in front of and behind the wheels not being raised.

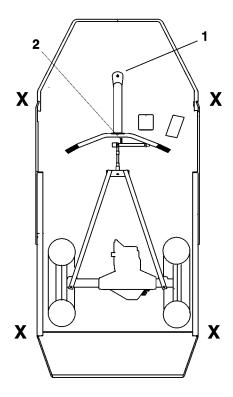

Do not attempt to raise the rear wheels without first raising the front of the vehicle and supporting on jack stands.

Due to the low ground clearance and short wheel base, the vehicle should be raised only enough to remove the front axle or the rear wheels.

Servicing that requires access to the underside of the vehicle should be accomplished by raising the front of the vehicle with a chain hoist attached to the front frame members. Always use an additional safety chain and jack stands to prevent injury in the event of a hoist malfunction.

4.3———LUBRICATION GUIDE

Use the following lubrication guide to identify lubrication points. Use a lithium-based lubricant.

X JACKING AND JACK STAND LOCATIONS

LUBRICATION AREA	NUMBER OF LUBRICATION POINTS OR FITTINGS*
Fork pivot bushing Brake pedal pivot	1 1

^{*} Use a lithium base pressure gun grease.

4.4———REAR ACCESS

The cargo area floor may be removed to provide access to the brakes, differential and drive motor.

WARNING

The cargo area floor is a machinery guard and its removal exposes the operator to moving parts. Keep hands, hair and clothing away from moving parts.

4.5———BRAKE ADJUSTMENT

Properly adjusted brakes should not drag when the wheels are turned. If a brake adjustment is needed, complete the following steps and refer to Figures 3 and 4.

- 1. Loosen the nut securing the front clevis.
- 2. Remove the cotter pin, washer and clevis pin.
- Turn the clevis on the brake rod as required to achieve 1/4" (6.4 mm) pedal free travel. Free travel is movement of the pedal without activating the brake.
- 4. Reinstall the clevis pin and washer.
- 5. Install a new cotter pin and tighten the clevis nut.

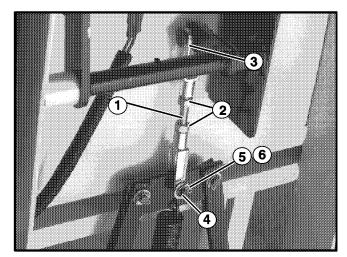

FIGURE 3

- 1. Brake Rod
- 2. Nut
- 3. Front Clevis
- 4. Clevis Pin
- 5. Washer
- 6. Cotter Pin

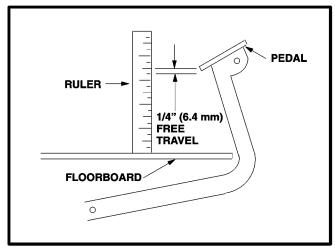

FIGURE 4

4.6———TIRES

Tire Condition and Pressure

Tire condition should be inspected on a daily basis and pressure should be checked weekly, when tires are cool.

For optimum performance, all three tires should have the same pressure. Tires should be inflated to a pressure between 25 psi (172 kPa) and 60 psi (413 kPa).

CAUTION

Use caution when inflating a low tire to recommended pressure. Check pressure with a low pressure tire gauge before connecting an air hose to a partly inflated tire.

Due to the low air volume requirements of a small tire, over inflation may be reached in a matter of a few seconds, which could cause the tire to explode.

Removing and Reinstalling Front Tire

To remove and reinstall the front tire, complete the following steps and refer to Figure 5.

- Loosen the axle nuts and lower entire wheel, hub and axle assembly from front fork. Remove the four wheel retaining nuts.
- 2. Completely deflate the tire, then remove from wheel.
- 3. Reinstall tire and wheel by reversing the above sequence and tighten wheel retaining nuts. Torque to 70 to 80 ft./lbs. (95 to 108.5 N·m).
- 4. Position the large flat washer located on the ends of the axle above the front axle locks.
- 5. Torque axle nuts to 100 to 120 ft./lbs. (130 to 156 N·m).

NOTE: Install the wheel assembly with the valve stem on the same side as the wheel retaining nuts.

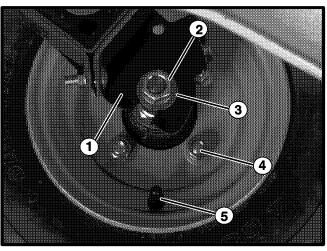

FIGURE 5

- 1. Front Axle Lock
- 2. Axle Nut
- 3. Retaining Washer
- 4. Wheel Retaining Nut
- 5. Valve Stem

WARNING

To prevent possible injury, always deflate the tire completely before removing from the wheel.

When reinstalling the front wheel assembly, always place the axle and retaining washer over the axle locks (as shown) and tighten the axle nuts. Torque axle nuts to 100 to 120 ft./lbs. (130 to 156 N.m). Failure to follow the procedure may allow the axle to drop, resulting in loss of vehicle control.

Removing and Reinstalling Rear Tire

- 1. Remove the wheel retaining nuts and remove the wheel assembly from the hub.
- 2. Completely deflate the tire, then remove from wheel.
- Reinstall the tire and wheel by reversing above sequence and tighten wheel retaining nuts. Torque to 70 to 80 ft./lbs. (95 to 108.5 N·m).
- Make sure the valve stem is located toward the outside.

WARNING

To prevent possible injury, always deflate the tire completely before removing from the wheel.

NOTE: Improper inflation will shorten tire life.

Air pressure needed is determined by payload carried.

Use replacement tires that meet or exceed original equipment specifications.

The differential capacity is 10 oz. $(.3 \, \text{L})$ of E.P. SAE 80-90 multigrade lubricant. The lubricant should be maintained as indicated by the oil level check/fill plug, shown in Figure 6.

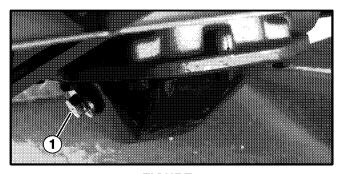

FIGURE 6

1. Check/Fill Plug

NOTE: Do not fill the differential with more lubricant than required.

4.8—FRONT & REAR WHEEL BEARINGS

The front wheel bearings are of the tapered roller type. The rear wheel bearings are sealed ball bearings. See your authorized Cushman dealer for any bearing service required.

4.9——BRUSH REPLACEMENT

At regular maintenance intervals, the motor brushes should be checked for wear or damage. See your authorized Cushman dealer for any service required.

4.10 MOTOR TERMINALS

Motor wire to motor terminal connections should be clean and tight for maximum motor efficiency and to avoid motor damage. The wire terminal retaining nuts should be torqued to 50 to 70 in./lbs. (5.5 to 8 N·m). Do not turn the motor terminals from their original position.

NOTE: On EE units, be sure to replace terminal boots.

4.11———LIGHT BULB REPLACEMENT

For vehicles with a headlight, replace the headlight bulb by pivoting the light forward and removing the two Phillips head screws from the back side. Separate the light assembly, insert the new bulb, and secure with the screws previously removed.

To replace a taillight bulb, roll the rubber bezel from around the edge of the taillight and remove the lens. Replace bulb and secure lens.

NOTE: On EE units, be sure to replace head light and rear light guards.

4.12——BATTERY SPECIFICATIONS, SERVICE AND CHARGING

Specifications

This vehicle requires four "golf cart type" 6 volt batteries, each with a minimum capacity of 180 A.H. (amperehours at the SAE 20-hour rate) and 5/16" (8 mm) stud posts.

The maximum case dimensions are:

Length	10 3/8" (264 mm)
Width	7 3/16" (183 mm)
Height (including posts)	11 5/8" (295 mm)

Batteries should be connected as shown in Figure 7.

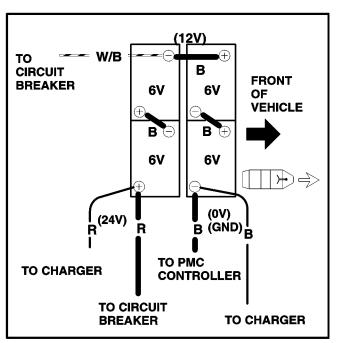

FIGURE 7

Service and Charging

Preventive maintenance and regular charging will help maximize battery performance and life. Preventive maintenance includes:

- keeping terminations tight
- checking electrolyte level and adding water as necessary
- cleaning the batteries and terminations
- treating terminals with terminal protection spray (Part No. 841192)

Batteries should also be properly charged after each day of vehicle use. The standard vehicle is equipped with a built-in 24 volt, 25 amp DC, 120 volt AC, 60 Hz, fully automatic charger located under the operator's seat. The charger is designed to shut off automatically when the battery set is fully charged.

Be certain to observe the following safety precautions when working with vehicle batteries:

WARNING

Wear safety glasses when working with batteries. Battery electrolyte is an acidic solution and should be handled with care. If electrolyte is spilled or splashed on any part of the body, immediately flush the exposed area with liberal amounts of water and obtain medical attention immediately.

Keep all smoking materials, open flame or sparks away from the batteries.

WARNING

Hydrogen gas, which can be explosive, is formed when charging batteries. Do not charge batteries without adequate ventilation.

Do not attempt to recharge the batteries with a charger not designed for this vehicle.

Undertrained/unauthorized persons should NEVER attempt to service or recharge the batteries of this vehicle.

To avoid possible injury, use an adequate lifting device to lift the batteries.

NEVER use metal chains to lift batteries, as they can cause electrical arcing which may result in battery explosion. Before charging batteries, ensure the following:

- Electrolyte levels in all cells are at the recommended level and the plates are covered.
- The area in which the batteries will be charged is well ventilated and capable of removing the hydrogen gas that is generated by the charging process.
- The charging connector components are clean and in good condition.
- The charger is turned off before connecting or disconnecting.

I.13———STORAGE

If the vehicle is to be stored for a prolonged period, clean and reconnect the batteries, connecting wires and battery racks. Make sure the batteries are fully charged.

Check the state of charge of the batteries every 30 days and recharge as necessary to maintain the specific gravity above 1.230 (corrected for electrolyte temperature*).

*Hydrometer readings should be increased .004 for every 10 degrees F. (5.5°C) above 80 degrees F. (27°C) and decreased .004 for every 10 degrees F. (5.5°C) below 80 degrees F. (27°C).

WARNING

Wear safety glasses when working with batteries. Battery electrolyte is an acidic solution and should be handled with care. If electrolyte is spilled or splashed on any part of the body, immediately flush the exposed area with liberal amounts of water and obtain medical attention immediately.

4.14—————CLEANING

To maintain vehicle appearance, adhere to the following guidelines for cleaning:

- Clean vinyl seat and plastic or rubber trim with a mild soap solution applied with a sponge or soft brush and wipe with a damp cloth.
- Remove oil, tar, asphalt, etc. with commercial rubber/vinyl cleaner.
- Wash painted surfaces with lukewarm or cold water and mild soap. Do not use harsh soap or chemical detergents.
- Occasionally flush the underbody with plain water to remove corrosive materials and dust. If sediment is packed in closed areas, loosen to ease removal.

NOTE: Make sure vehicle is dry before operating.

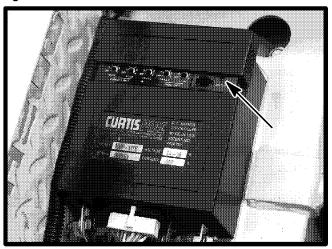

4.15——— TOUCH-UP PAINT

Safety Yellow (lead free)

- 16 oz. (0.5L) spray can Part No. 833252
- 1 qt. (0.95L) can Part No. 833251

PROGRAMMABLE SPEED CONTROLLER

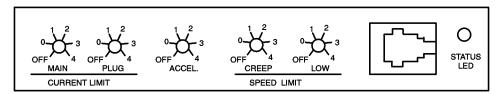

The vehicle is equipped with an electronic speed controller that does not require servicing.

Controller LED Status Indicator

DIAGNOSTICS AND TROUBLESHOOTING

LED DIAGNOSTICS

During normal operation, with no faults present, the Status LED flashes a single flash at approximately 1 flash/second. If the controller detects a fault, a 2-digit code (see Table) is flashed continuously until the fault is corrected. For example, code "3,2" -welded direction contactor - appears as:

	000 00	000 00
(3,2)	(3,2)	(3,2)

9

	TROUBLESHOOTING CHART								
LED CODE	PROGRAMMER LCD DISPLAY	EXPLANATION	POSSIBLE CAUSE						
1,2	HW FAILSAFE	hardware fail-safe error	Controller defective.						
1,3	M-FAULT	M-output shorted	 M-output shorted to ground. Direction contactor not closing. Direction contactor not closing fast enough. Internal motor short to ground. 						
1,4	SRO	SRO fault	 Improper sequence of KSI, brake and direction inputs. Wrong SRO type selected. Brake or direction switch circuit open. Sequencing delay too short. 						
2,1	THROTTLE FAULT 1	5kΩ–0 or wiper fault	 Throttle input wire open. Throttle input wire shorted to ground or B+. Throttle pot defective. Wrong throttle type selected. 						
2,2	BB WIRING CHECK	emer. reverse wiring fault	 BB wire open. BB check wire open. 						
2,3	HPD	HPD sequencing fault	 Improper seq. of KSI, brake, throttle inputs. Wrong HPD type selected. Misadjusted throttle pot. 						
2,4	THROTTLE FAULT 2	Pot Low broken or shorted	 Pot Low wire open. Pot Low wire shorted. Wrong throttle type selected. 						
3,1	CONT DRVR OC	driver output overcurrent	Direction contactor coil shorted. Shunt field shorted.						
3,2	DIR CONT WELDED	welded direction contactor	Direction contactor stuck closed.						
3,4	MISSING CONTACTOR	missing contactor or shunt	 Direction contactor coil open. Direction contactor missing. Shunt field open. Wire to shunt or direction contactor open. 						
4,1	LOW BATTERY VOLTAGE	low battery voltage	 Battery voltage <16 volts. Corroded battery terminal. Loose battery or controller terminal. 						
4,2	OVERVOLTAGE	overvoltage	 Battery voltage >45 volts. Vehicle operating with charger attached. 						
4,3	THERMAL CUTBACK	over/under-temp. cutback	 Temperature >85°C or <-25 °C. Excessive load on vehicle. Improper mounting of controller. Operation in extreme environments. 						

MANUAL ADJUSTMENTS

Five parameters – high speed main current limit, high speed plug current limit, acceleration rate, creep speed and low speed – can be adjusted manually with a small insulated screwdriver. The five potentiometers are accessed through holes on the adjustment panel, located under the sliding protective cover on top of the controller.

The pot's relative position indicates the approximate value over the allowable range. For example: if the main current limit range is 20 to 250 amperes, position "0" corresponds to 20 amperes and position "4" to 250 amperes. Setting the post halfway (at position "2") corresponds to approximately 135 amperes.

The main and plug current limit pots affect only the high speed mode of operation.

The low speed settings of main and plug current limit can only be changed by the programmer. If the high speed input is not connected, or if anti-tiedown is activated, the current limit pots will have no effect on operation as the controller is operating in low speed mode. NOTE: It may be possible to manually adjust the high speed current limit pots below the programmed low speed current limit settings. Should this occur, low speed would have higher current limits than high speed.

5 PROGRAMMABLE SPEED CONTROLLER

CUSHMAN FACTORY SET CONTROLLER PARAMETERS

PARAMETER	RANGE	DEFAULT	DESIRED	UNITS	DESCRIPTION
Current Limit, Main	20 – 250	250	250	Amps	Maximum current forward speed
Current Limit, Low Speed Main	20 – 250	250	250	Amps	Maximum current reverse speed
Current Limit, Plug	20 – 250	70	70	Amps	Max. plug current forward speed
Current Limit, Low Speed Plug	20 – 250	70	70	Amps	Max. plug current reverse speed
Current Limit, Emergency Reverse	20 – 250	140	250	Amps	Max. plug current in emergency reverse
Current Limit, Low Speed Emergency Reverse	20 – 250	140	250	Amps	Max. plug current in low speed emergency reverse
Current Limit, Ramp Start	20 – 250	140	250	Amps	Max. plug current during ramp start
Current Limit, Low Speed Ramp Start	20 – 250	140	250	Amps	Max. plug current during ramp start in low speed
Acceleration Rate	0-3	1	0.8	Sec.	Time to reach full output from zero output
Quick Start	0 – 6	1.4	0.2		Output will respond to rate of throttle change
Throttle Type	type 1, 2, 3	type 1	type 2	Ω or V	Type of throttle input type 2 = 0-5V, 3-wire pot
Ramp Shape	20 – 70	50	50	%	Adjust desired PWM output at 50% throttle to vary throttle sensitivity at low speed
Creep Speed/Min. Duty Cycle	0 – 25	10	0	%	Speed at min. throttle setting
Low Speed	40 – 100	60	55	%	Max. speed in reverse
High Speed	40 – 100	100	100	%	Max. speed in forward
Emergency Reverse Speed	25 – 100	100	100	%	Speed during emergency reverse
Sequencing Delay	0-3	0	0	Sec.	Delays HPD and SRO from brake after controller is enabled
Variable Plug	On/Off	On	On		On = plug current dependent upon throttle position. Off = fixed
High Pedal Disable (HPD)	0–2	0	1		Option to disable controller if throttle is applied before brake or keyswitch input (KSI)
Static Return To Off (SRO)	type 0, 1, 2	type 1 brake	type 0 No SRO		Sequencing of KSI or brake before direction is selected
Anti-tiedown	On/Off	On	Off		Prevents high speed mode if HSS in not released after brake

W A R Ņ G U S E H A N D HOLDS

2

1

PROVIDE BATTERY VENTILATION
DURING CHARGING. KEEP OPEN
FLAMES OR SPARKS AWAY FROM
BATTERIES AT ALL TIMES. DO NOT
SHORT ACROSS BATTERIES TO
CHECK CONDITION OF BATTERIES.
BATTERIES MAY EXPLODE. BATTERY
ACID CAN CAUSE SEVERE DAMAGE
TO EYES, SKIN AND CLOTHING.
FLUSH CONTAMINATED AREA
IMMEDIATELY WITH WATER.
WHEN CLEANING BATTERIES. KEEP
SOLUTION AND WATER AWAY FROM
CHARGER AND SWITCHES.

WARNING

FAILURE TO HEED THESE WARNINGS MAY RESULT IN PERSONAL OR FATAL INJURY TO YOU OR OTHERS AND MAY ALSO RESULT IN EQUIPMENT AND-OR PROPERTY DAMAGES

BEFORE OPERATING VEHICLE:

READ AND UNDERSTAND OPERATOR'S MANUAL (LOCATED UNDER SEAT).
ALL OCCUPANTS MUST BE SEATED IN FACTORY APPROVED SEATS.
SWITCHES SPARK-DO NOT OPERATE IN EXPLOSIVE OR COMBUSTIBLE ATMOSPHERE.

WHILE OPERATING VEHICLE:

WHILE OPERATING VEHICLE:
KEEP BODY INSIDE VEHICLE, STAY IN SEAT, USE HAND HOLDS,
SUDDEN SHARP TURNS, UNBALANCED OR TOP HEAVY LOADS CAN CAUSE UPSET.
REVERSE SPEED IS EQUAL TO FORWARD SPEED.
CARGO MUST BE SECURED TO PLATFORM.
AVOID SUDDEN STARTS AND STOPS TO AVOID UNSEATING OF PASSENGERS.
AD JUST SPEED TO CONDITIONS.

ADJUST SPEED TO CONDITIONS.

BEFORE LEAVING VEHICLE:

SET DIRECTION SELECTOR TO "OFF" POSITION.
TURN KEY TO VERTICAL "OFF" POSITION AND REMOVE.
IF MALFUNCTION OCCURS, OR ADJUSTMENT IS NEEDED, DO NOT USE, HAVE ALL
WORK PERFORMED BY AUTHORIZED PERSONNEL.
APPLY HAND OR FOOT BRAKE-NOT AUTOMATICALLY APPLIED.

7

WARNING

READ OPERATOR'S MANUAL BEFORE
OPERATING CHARGER
DO NOT CHARGE IN EXPLOSIVE ATMOSPHERE.
DO NOT OPERATE VEHICLE WHILE CHARGING.
SPARKS MAY IGNITE BATTERY GAS
(HYDROGEN).
TO PREVENT ELECTRICAL SHOCK, DO NOT
USE 2-PRONG ADAPTORS.
REPLACE DAMAGED CHARGER CORDS AND
WIRES IMMEDIATELY.

OPERATING INSTRUCTIONS

CONNECT CHARGER PLUG TO A GROUNDED RECEPTICLE WITH POWER RATING AS INDICATED ON CHARGER.

CHARGER WILL TURN ON AND SHUT OFF AUTOMATICALLY

KEEP CHARGER VENTILATION OPENINGS CLEAR. POOR VENTILATION CAN DAMAGE CHARGER.

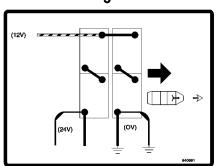

BATTERIES CHARGED IN UNIHEATED AREAS (BELOW 65 F) SHOULD BE CHARGED AS SOON AFTER USE AS POSSIBLE. CHARGE BATTERIES ONCE EACH WEEK FOR FOUR HOURS IN TEMPERATURE ABOVE 65 F TO IMPROVE STATE OF CHARGE AND BATTERY LIFE.
